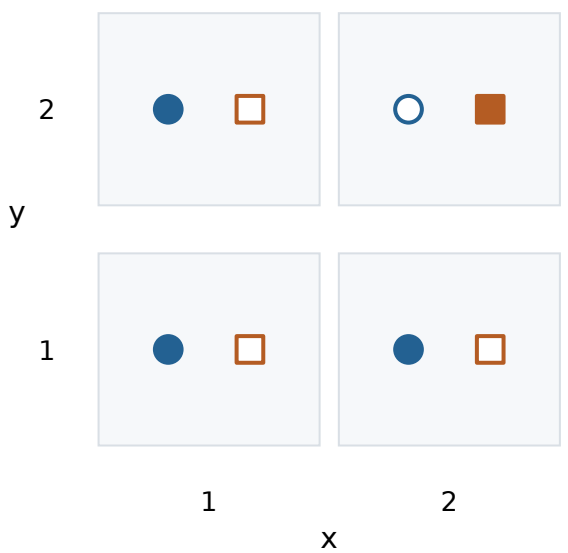
Seven periodic configurations, grouped by cell occupation

Class 1 | One particle in every cell

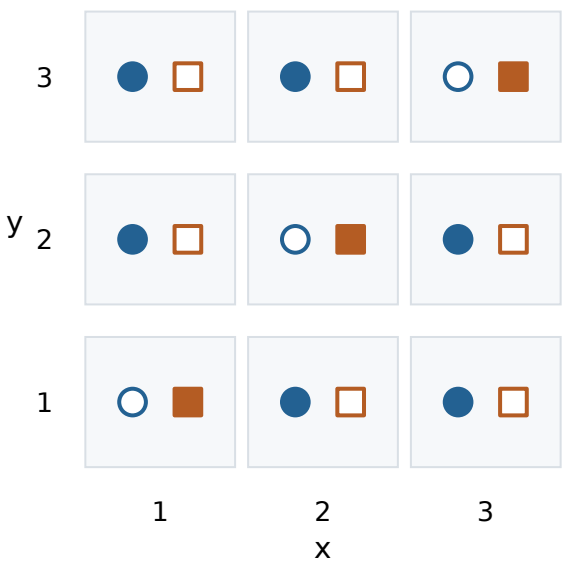
one_B_2

m = 2 | (n0, n1, n2) = (0, 4, 0)



diagonal_B_3

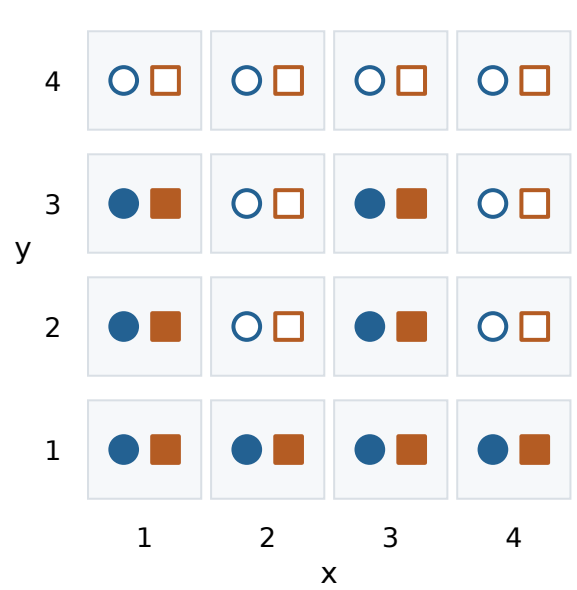
m = 3 | (n0, n1, n2) = (0, 9, 0)



Class 2 | Empty and doubly occupied cells only

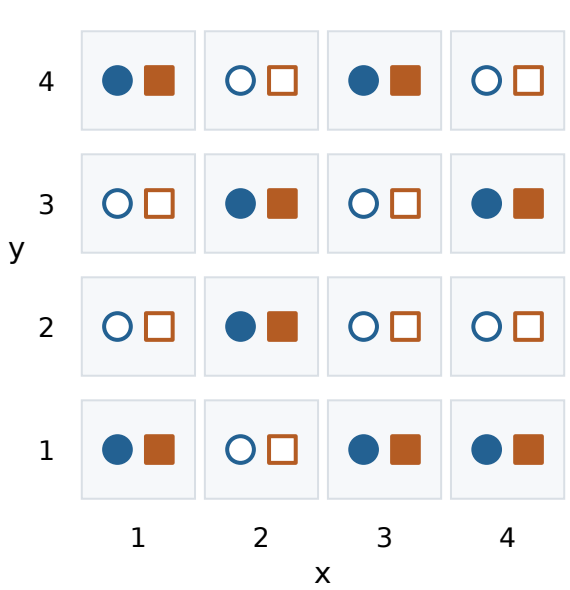
pure02_block4

m = 4 | (n0, n1, n2) = (8, 0, 8)



pure02_irregular4

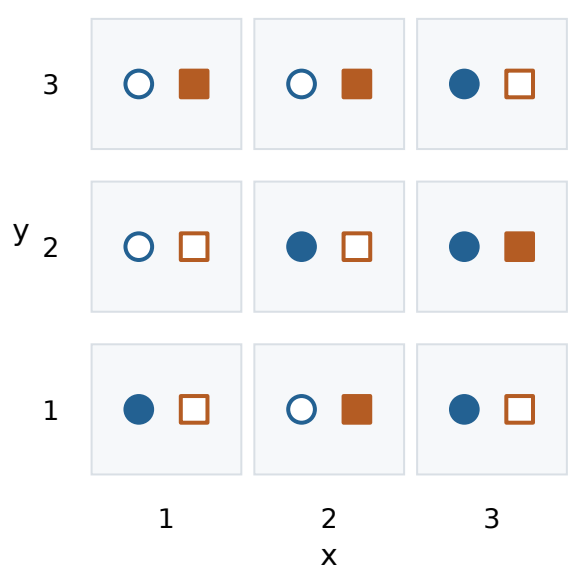
m = 4 | (n0, n1, n2) = (8, 0, 8)



Class 3 | Empty, single and double cells coexist

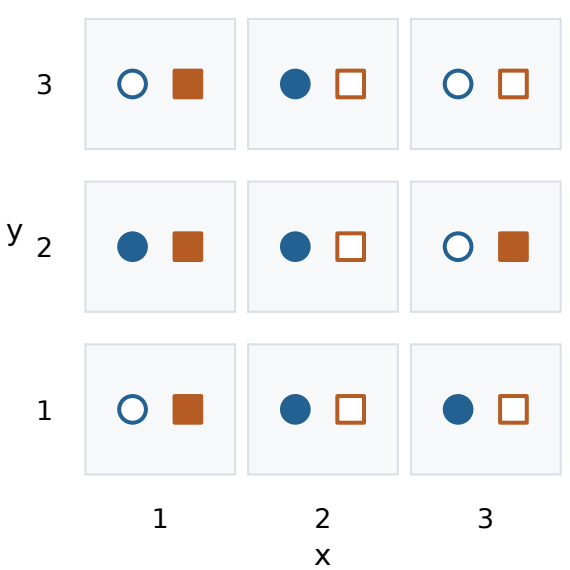
random_half_3

m = 3 | (n0, n1, n2) = (1, 7, 1)



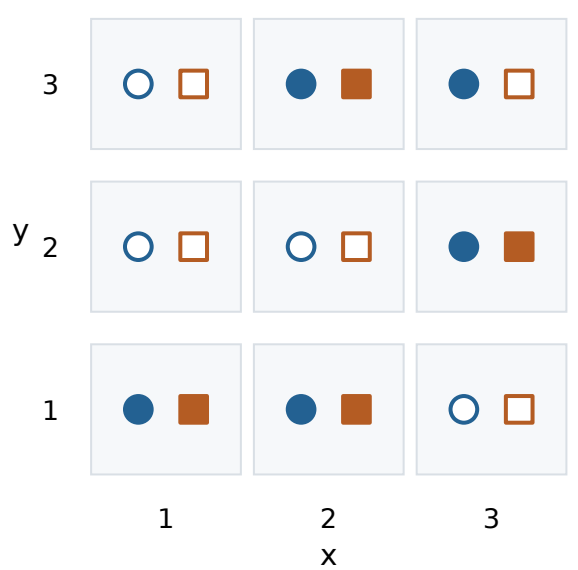
general_matched_a

m = 3 | (n0, n1, n2) = (1, 7, 1)



near02_irregular3

m = 3 | (n0, n1, n2) = (4, 1, 4)



Filled = occupied; hollow = empty; grey box = one A/B cell. Cell-coordinate schematic.
Ground-state reachable at checked sizes only. Classification does not certify entropy scaling.
