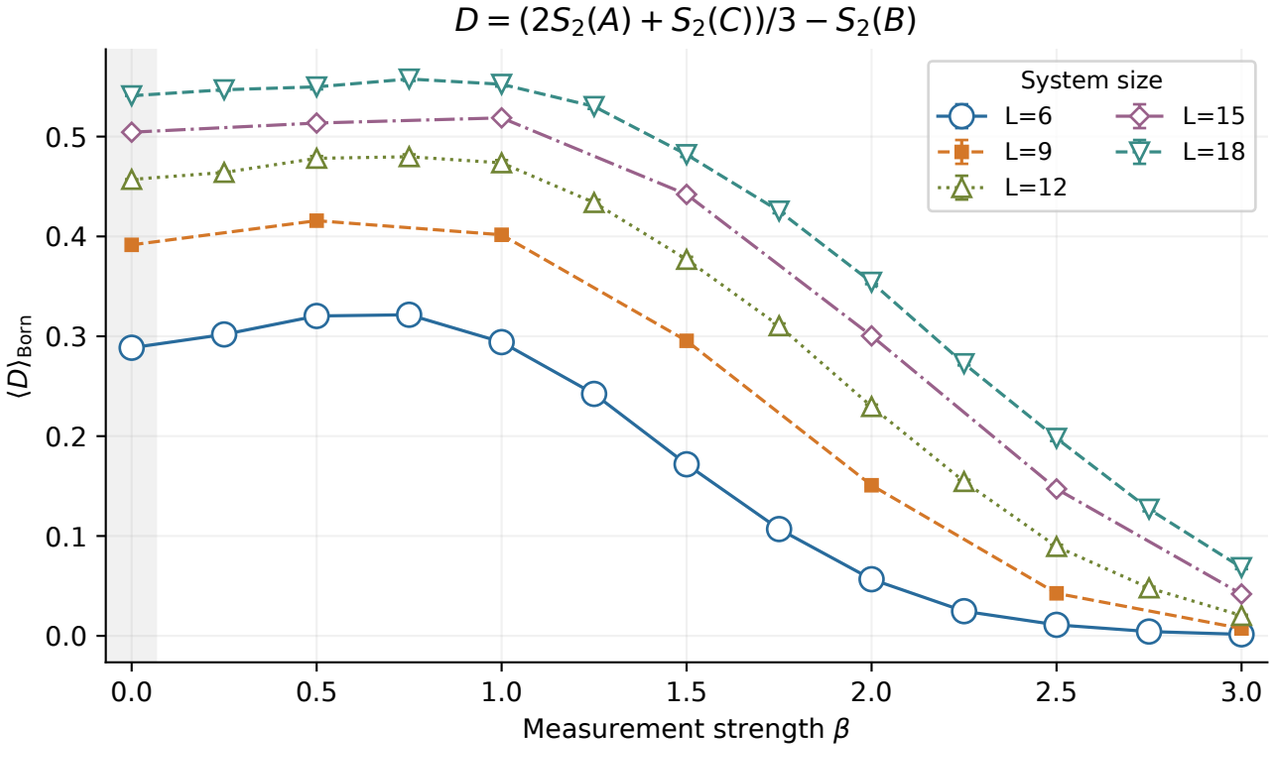
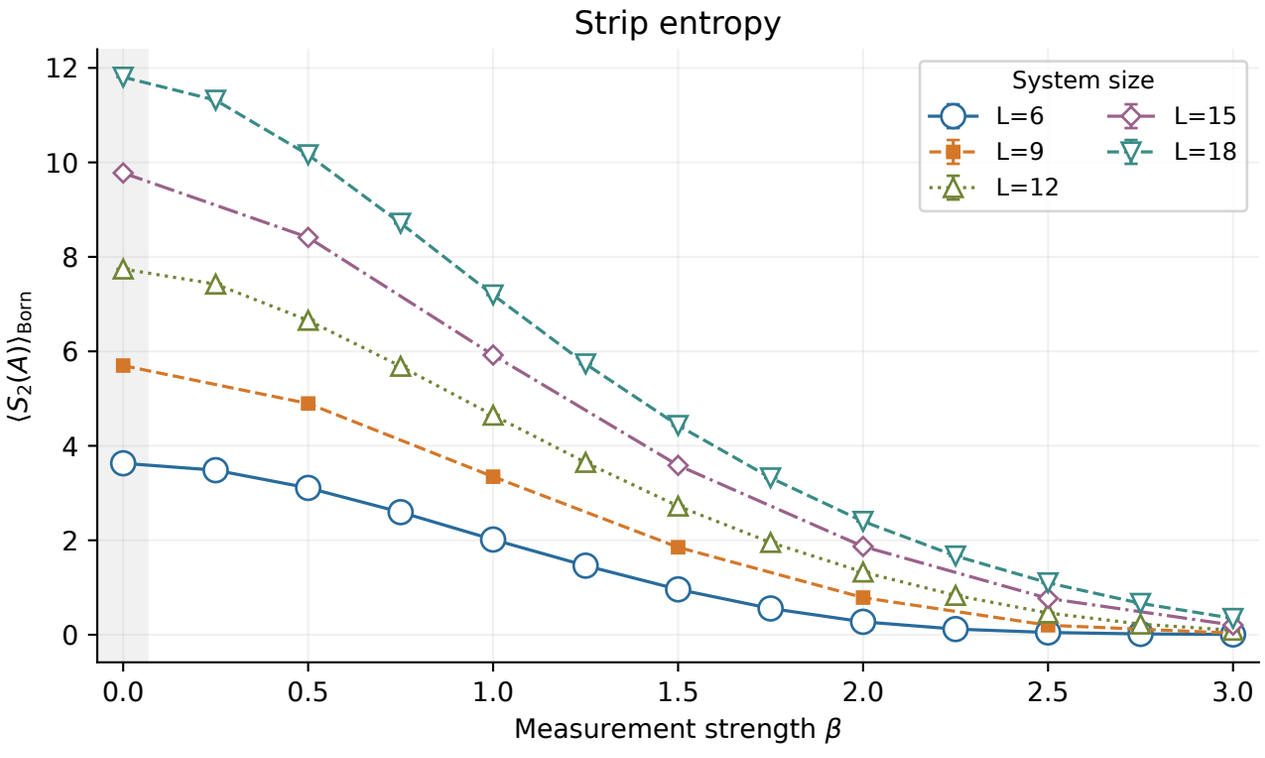
PROGRESS | L=21,24 PENDING | NO SCALING FIT

Frozen snapshot 20261027_083324 UTC: 192/240 chains; 48 complete cases at L <= 18. Primary staggered state: mu/t = 1e-8.





beta > 0: original local Metropolis; error bars = max(raw-ESS MCSE, eligible block-mean SEs).
beta = 0 (gray band): direct deterministic entropies from the state audit, with no Monte Carlo error bar.
Lines connect measured points only. This snapshot contains no L=21/24 results and no size-scaling or corner-coefficient inference.
