Analytic channel results; no entropy coefficient is inferred from these curves
(a) Exact mean-channel attenuation
$\kappa_a(\beta)$ (log scale)
β
a = 36
a = 324
$a \to \infty$: $\mathrm{sech}^2\beta$
Lower bound: sech(2β)
(b) Size / strength crossover of the channel
$\kappa_a / e^{-2\beta}$
$z = ae^{-2\beta}$ (log scale)
Fixed-z limit: $2[1 + I_1(2z)/I_0(2z)]$
a = 144
a = 5184
