Exact inequalities; lines guide the eye, no scaling fit
Bounds: $2\kappa^2 V_{A,0}$, $4\ln(2) V_{A,0}$; $\kappa^2 D^{\mathrm{full}}_{V,0}$. 1 MCSE = max(iid SE, four-batch SE), not a strict CI.
$\beta = 1$
$\beta = 3$
$\langle S_2(A) \rangle$ and bounds
$\langle D_V^{\mathrm{full}} \rangle$ and lower bound
Exact lower bound
Exact upper bound
Born mean ± 1 MCSE
