one_B_3 | beta=0 | Numerical support within tested windows
Adjacent raw log slopes; no fitted corrections
L=72
L=144
L=216
L=108
L=180
$\Delta D/\Delta \ln \theta$
$\sqrt{\theta_i \theta_{i+1}}$
Same-time size differences / measured window span
72/108, window 4-9 (pilot)
144/180, window 4-7
180/216, window 4-9
$[D(L_{large}) - D(L_{small})]/\mathrm{span}(D_{large})$
θ
Each size pair has its labeled window and its own raw-D-span denominator. L72/108 at late times is exploratory and outside the final scale screen.
