Common size window: L = 6–36
Solid: log + 1/L; dotted: log. β = 3 fits fail; fitted c is not an identified corner coefficient.
β = 0: same corner angles, two shapes
log + 1/L: c = 0.15632
log + 1/L: c = 0.15555
p = 1/3
p = 1/2
$\overline{D}_p$
ln L
β = 3: same corner angles, two shapes
diagnostic c = 0.328; χ²/dof = 30.0
diagnostic c = 0.380; χ²/dof = 10.1
p = 1/3
p = 1/2
$\overline{D}_p$
ln L
Local log slopes; shared endpoints are correlated
p = 1/3
p = 1/2
$\Delta D_p/\Delta \ln L$
$\sqrt{L_i L_{i+1}}$
Local log slopes; shared endpoints are correlated
p = 1/3
p = 1/2
$\Delta D_p/\Delta \ln L$
$\sqrt{L_i L_{i+1}}$
