Same postmeasurement entropy pipeline: local vs independent sampling
L6, beta=0
L6, beta=1
L6, beta=3
Mean Renyi entropy / entropy difference
local
iid
S2(A)
S2(B)
paired A-B
1000 outcomes per method and beta; errors are 2 block-SE. A-B is a finite-size observable, not an extracted corner coefficient. Small x-offsets separate markers.
