(a) level crossings; x = interpolated across a wide gap
h = 0.3
h = 0.5
h = 0.7
h = 0.9
slope 2 (fixed β)
$z_h(L)$
L
(b) no single crossover exponent
p = 2: rate of z at fixed β
exponent p in $z_h \propto L^p$
threshold h defining z_h
(c) fixed β: plateaus at β = 1.5, 2 for L ≥ 24
$\overline{D_2}/D_{gs}(L)$
L
β = 0.5
β = 1.0
β = 1.5
β = 2.0
β = 3.0
(d) fixed β vs the ground state
$D_{gs}(L)$
$\overline{D_2}$
ln L
